### Mounting:

Choose one of the holes for the screw to get forward/backward location, only one screw is needed.

Loosen the mounting screw and push it, the rail system will be extended, fix the screw into rail's groove.

Tighten the screw to finish the installation.

### Zero Adjustment:

1. Fix the laser sight to the barrel on a firearm.
2. Place the firearm in a vise or on a shooting bench.
3. Place a target about 30m away.
4. The next step assumes that the firearm's iron sights or other sighting system is correctly zeroed for 30m. If not, turn the laser of and fire 5 rounds at the target to see the point of impact grouping. If necessary, adjust your sights to the correct point of impact.
5. Take aim again using the exact same sight picture as in step#4. Turn on the laser sight and you will see the difference in distance between the laser dot and the real point of impact. To adjust the laser to be point of impact the windage and elevation will need to be adjusted. Rotating the windage and elevation with Allen wrench to adjust the laser.
6. Now use the laser sight, aim at the target, and shoot another group of 5 rounds. If the point of the laser is near the points of impact, then the Zero adjustment has been accomplished.

### Warranty:

This product is free from defects in materials and workmanship. Within 15 days after receipt, any defective product will be offered free replacement by the manufacturer unconditionally. We will repair or replace, at its option and without charge, any product or part which is found to be defective under normal use and service with 12 months counting from the date of purchasing with the proof of purchase.
